EXOS - Feed the Future

Country: Colombia · Barranquilla **Category:** Air & Environment **Impact Areas:** Circular Economy **Stage:** Prototype **Website:** https://www.linkedin.com/company/exos-feed-the-future

Elevator Pitch

At EXOS, we transform organic waste into valuable protein reintegrating them into the heart of the food chain. Through a bioconversion process using Black Soldier Fly larvae, we produce the raw material to manufacture products high in proteins and nutritional values. Initially, we will use part of our production initially to attack pet health issues.

Climate Problem

EXOS is a company that addresses various problems associated with the environment and health. The first and most important is that our operation is built on the value we give to organic waste, as these materials mostly end up in landfills contributing to environmental pollution. Through our operation, these waste materials are converted into protein with high nutritional value, which we will use to address the other problem we tackle, which corresponds to the health of our pets.
